Ready!

A

Don't be shy! Press play. Let the loop play! When you're ready press rec and record your freestyle!

About

Cassete Tape is a html 5 hiphop drum loop player and voice recorder. Perfect to record a freestyle in a window browser. You just need to press play to listen to the hiphop loop and when you feel ready just press rec and it starts recording your voice. After that a wav file with your freestyle is generated and you can save on your computer.
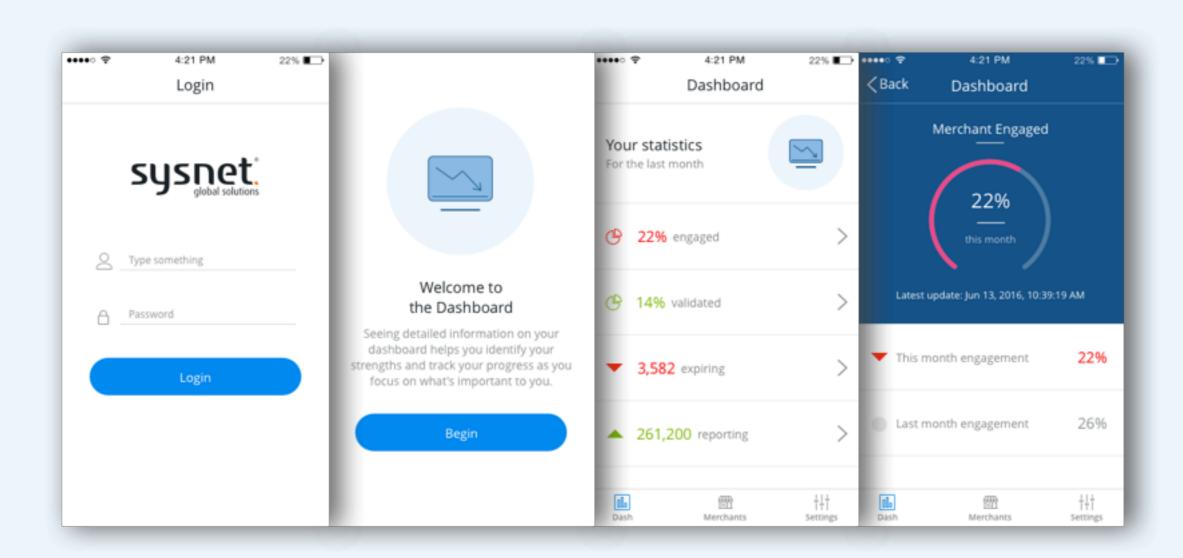

This is a Chrome Experiment. It was developed to work only in this browser. It uses some technologies not yet fully supported by all browsers.

Cassette Tape

I created this project to explore new web technologies. This projects is showcased on Google Chrome Experiment page. I also presented a demo on Google I/O Dublin 2016.

SYSNET MOBILE APP

Sysnet Global Solutions provides payment card industry, cyber security and compliance solutions that help businesses to improve security and acquiring organisations to reduce risk.
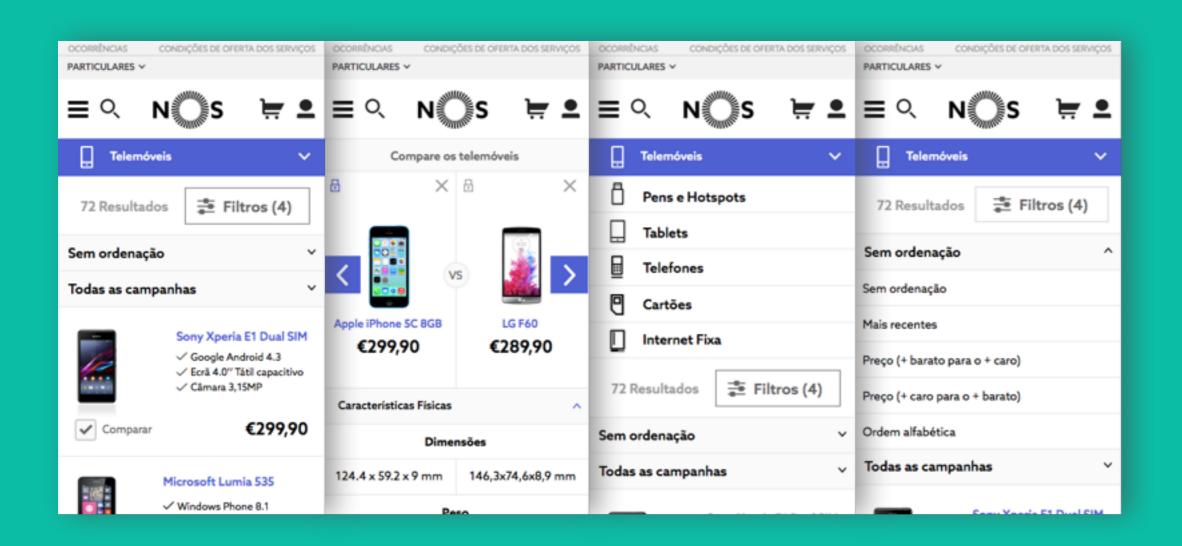

I've been working as part of the product team where I designed and created a mobile application with Ionic and D3 as a proof-of-concept.

Dare Design System Webpage

I wanted to implement a Design System for Sysnet. I started to create the concept and then I coded the web app for the design system with AngularJS and LESS.

The project didn't go live.

Mobile Store Web

NOS is a Portuguese media company whose main assets include a satellite, cable operator, and ISP, a mobile phone operator, a movie distributor and a virtual carrier of mobile phone services.
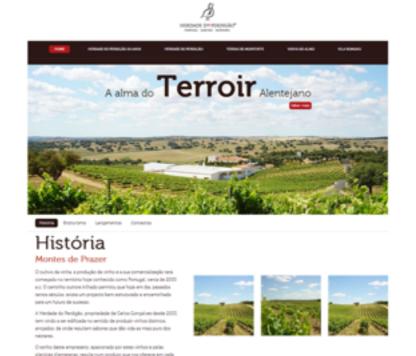

The web site had just a desktop version for the mobile store. I was responsible for create the mobile version and then implement the UI (HTML, jQuery and SASS).

Wordpress Development

I've been working in two different companies as a Wordpress Developer. I was creating Wordpress themes from scratch and deploying for the client.

I know enough PHP and MySQL and I can create easily Wordpress themes. Recently I've been creating some themes with SAGE (starter theme based on HTML5 Boilerplate, gulp, Bower, and Bootstrap Sass). I also started some experiments with Wordpress API and AngularJS.

Self-care

NOS is a Portuguese media company whose main assets include a satellite, cable operator, and ISP, a mobile phone operator, a movie distributor and a virtual carrier of mobile phone services.

I was a key member of the UX team where I created some user interface designs for the new self care product. I also coded the front-end interface. I used SASS and created different jQuery plugins according to the project requierement.
